Appropriate Treatment for Upper Respiratory Infection (URI)

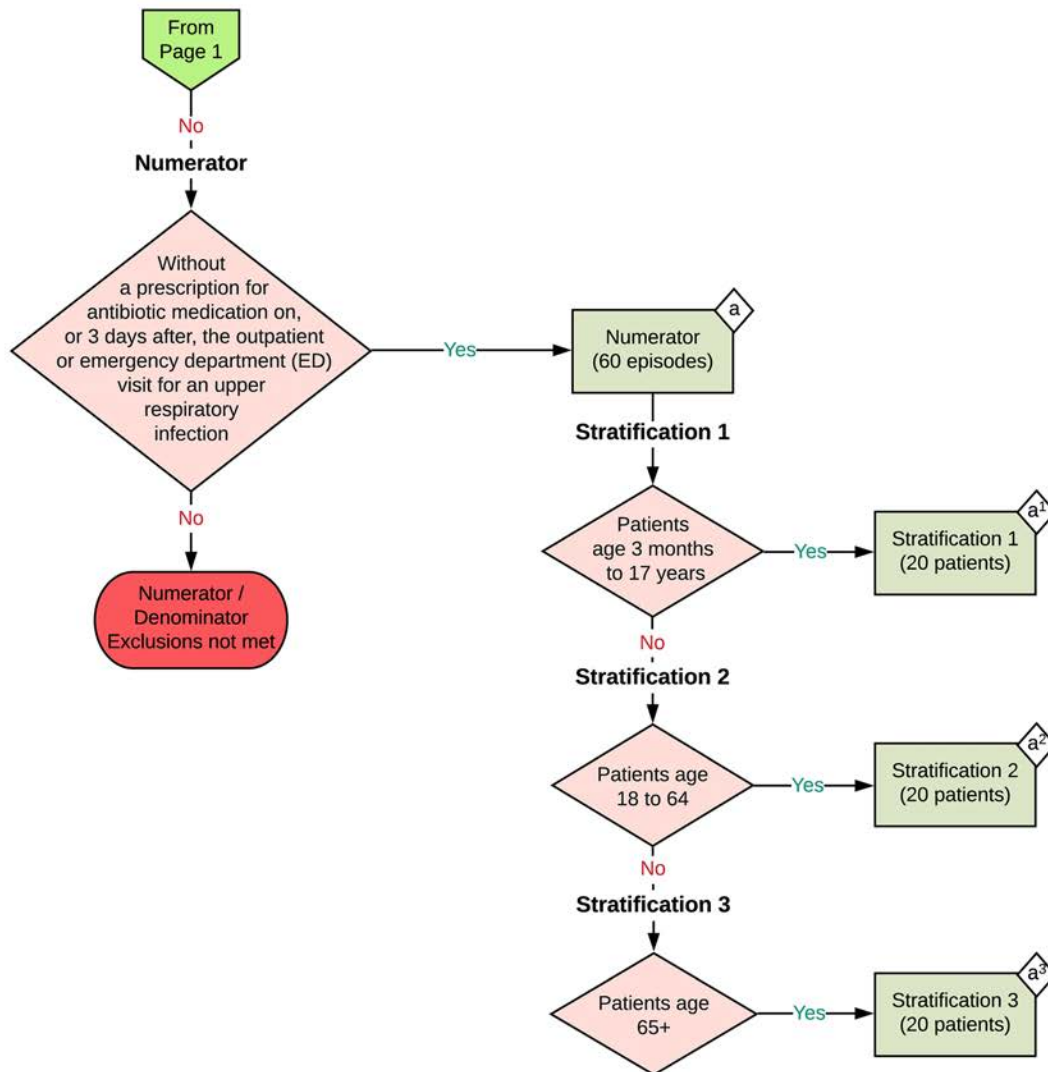

Percentage of episodes for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.

This eCQM is an episode-based measure

Appropriate Treatment for Upper Respiratory Infection (URI)

Sample Calculation

Performance Rate =

$$\frac{\text{Numerator (a = 60 patients)}}{\text{Denominator (b = 100 patients) - Denominator Exclusions (x = 20 patients)}} = \frac{60}{80} = 75 \%$$

Stratification 1 of Performance Rate =

$$\frac{\text{Numerator (a}^1\text{ = 20 patients)}}{\text{Denominator (b = 100 patients) - Denominator Exclusions (x = 20 patients)}} = \frac{20}{80} = 25 \%$$

Stratification 2 of Performance Rate =

$$\frac{\text{Numerator (a}^2\text{ = 20 patients)}}{\text{Denominator (b = 100 patients) - Denominator Exclusions (x = 20 patients)}} = \frac{20}{80} = 25 \%$$

Stratification 3 of Performance Rate =

$$\frac{\text{Numerator (a}^3\text{ = 20 patients)}}{\text{Denominator (b = 100 patients) - Denominator Exclusions (x = 20 patients)}} = \frac{20}{80} = 25 \%$$

NOTE: This flow diagram represents an overview of population criteria requirements. Refer to the eCQM specification for a complete list of data elements included in this measure and required for submission.

Description: Percentage of encounters for patients 3 months of age and older with a diagnosis of upper respiratory infection (URI) that did not result in an antibiotic dispensing event.

This eCQM is an episode-based measure.

eCQM Flow Narrative**Initial Population**

Start by identifying the Initial Population, which includes eligible encounters with a diagnosis of URI during the measurement period among patients 3 months of age and older.

Denominator

The Denominator equals the Initial Population. In the sample calculation provided at the end of the eCQM flow, the Denominator is equal to 100 episodes.

Denominator Exclusions

The Denominator Exclusions criteria identify a subset of the Denominator population by excluding URI episodes when the patient had a competing comorbid condition during the 12 months prior to or on the episode date, URI episodes when the patient had a new or refill prescription of antibiotics in the 30 days prior to the episode date, URI episodes when the patient had a competing diagnosis on or three days after the episode date, or URI episodes when the patient had hospice care overlapping the measurement period. In the sample calculation provided at the end of the eCQM flow, the Denominator Exclusions are equal to 20 episodes.

Numerator

The Numerator criteria identify a subset of the Denominator population (that did not meet the Denominator Exclusions criteria) by including URI episodes without a prescription for antibiotic medication on, or three days after, the eligible episode for an upper respiratory infection. In the sample calculation provided at the end of the eCQM flow, the Numerator is equal to 60 episodes.

Sample Calculation

A sample calculation is provided to help determine how the measure performance rate is derived. The measure performance rate is calculated by dividing the Numerator (total equals 60 episodes) by the difference between the Denominator (total equals 100 episodes) and the Denominator Exclusions (total equals 20 episodes), which is equal to a score of 75 percent.

Stratification 1

There are three strata for reporting separately by age group. Stratification 1 includes patients 3 months to 18 years of age. In the sample calculation provided at the end of the eCQM flow, Stratification 1 is equal to 20 patients.

Stratification 2

There are three strata for reporting separately by age group. Stratification 2 includes patients 18 to 64 years of age. In the sample calculation provided at the end of the eCQM flow, Stratification 2 is equal to 20 patients.

Stratification 3

There are three strata for reporting separately by age group. Stratification 3 includes patients 65 years of age and older. In the sample calculation provided at the end of the eCQM flow, Stratification 3 is equal to 20 patients.
