Measure Flow Diagram

Each population in the measure definition should be reported both without stratification and by each stratification criteria.

Measure Flow Narrative

The measure flow diagram on the preceding pages illustrates the steps to determine the population criteria for this measure.

Measure Description	This measure assesses the median time (in minutes) from admit decision time to time of departure from the emergency department for emergency department patients admitted to inpatient status
Initial Population	Start by identifying: <ul style="list-style-type: none">• Inpatient hospitalizations ending during the measurement period with length of stay less than or equal to 120 days• where the patient received services during the preceding emergency department (ED) visit at the facility when a decision to admit inpatient was made prior to departing the ED and the end of the location period is not null
Measure Population	The measure population criteria is the same as the initial population
Measure Population Exclusions	The measure population exclusions criteria identify a subset of the measure population by excluding emergency department encounters with an admission source in "Hospital Setting" (any different facility - by location or CCN) resulting in an inpatient stay

Measure Flow Narrative (Continued)

The measure flow diagram on the preceding pages illustrates the steps to determine the population criteria for this measure.

Measure Observation	The measure observation criteria identify the encounters from the measure population (that did not meet the measure population exclusions criteria) and calculates the median time (in minutes) from the Decision to Admit to inpatient and the time the patient physically departs the ED to inpatient hospitalization
Stratification 1	Stratification 1 is an aggregate of all patients seen in the ED and admitted as an inpatient who DO NOT have an inpatient encounter principal diagnosis (rank = 1) consistent with psychiatric/mental health disorders
Stratification 2	Stratification 2 is an aggregate of all patients seen in the ED and admitted as an inpatient who DO have an inpatient encounter principal diagnosis (rank = 1) consistent with psychiatric/mental health disorders
