

**ADDITIONAL INFORMATION REGARDING HYBRID MEASURES FOR CMS
QUALITY REPORTING PROGRAMS FOR ELIGIBLE HOSPITALS (EH) AND
CRITICAL ACCESS HOSPITALS (CAH)**

The table below titled “Hybrid Measures for Eligible Hospitals and Critical Access Hospitals” includes up-to-date information for Hybrid Measures that will be used to electronically report 2024 clinical quality measure data for the Centers for Medicare & Medicaid Services (CMS) quality reporting programs. Measures are not eligible for 2024 reporting unless and until they are proposed and finalized through CMS notice-and-comment rulemaking for each applicable program. Subsequent updates will be provided in a new version of this table with a summary of the updates located in a version history table at the end of the document.

Please note, because measure stewards updated the titles and descriptions for the Measures in this table, they may not match the information provided on NQF’s website. Measures that do not have an NQF number are measures that are not currently endorsed.

This page has been left blank for double-sided copying.

HYBRID MEASURES FOR ELIGIBLE HOSPITALS AND CRITICAL ACCESS HOSPITALS

CMS eCQM ID	NQF #	Measure Title	Measure Description	Numerator Statement	Denominator Statement	Measure Set Identifier
CMS529v4	2879	Core Clinical Data Elements for the Hybrid Hospital-Wide Readmission (HWR) Measure with Claims and Electronic Health Record Data	This logic is intended to extract electronic clinical data. This is not an electronic clinical quality measure and this logic will not produce measure results. Instead, it will produce a file containing the data that CMS will link with administrative claims to risk adjust the Hybrid HWR outcome measure. It is designed to extract the first resulted set of vital signs and basic laboratory results obtained from encounters for adult Medicare Fee-For-Service and Medicare Advantage patients admitted to acute care short stay hospitals.	N/A	Measure/Initial Population: All Medicare Fee-For-Service and Medicare Advantage encounters for patients aged 65 and older at the start of an inpatient admission, who are discharged during the measurement period (length of stay <365 days).	Hybrid HWR
CMS844v4	3502	Core Clinical Data Elements for the Hybrid Hospital-Wide (All-Condition, All-Procedure) Risk-Standardized Mortality Measure (HWM)	This logic is intended to extract electronic clinical data. This is not an electronic clinical quality measure and this logic will not produce measure results. Instead, it will produce a file containing the data that CMS will link with administrative claims to risk adjust the Hybrid HWM outcome measure. It is designed to extract the first resulted set of vital signs and basic laboratory results obtained from encounters for adult Medicare Fee-For-Service and Medicare Advantage patients admitted to acute care short stay hospitals.	N/A	Measure/Initial Population: All Medicare Fee-For-Service and Medicare Advantage encounters for patients aged 65 to 94 years at the start of an inpatient admission, who are discharged during the measurement period (length of stay <365 days).	Hybrid HWM
